Description

We have a table t1 with 2 columns ID and VALUE.

Let's say that t1 contains the following values:

- ID1, value1
- ID2, <null>

The value associated to ID2 is the null value.

When we execute the following query: `SELECT VALUE FROM t1 WHERE ID='ID2'`

the query_result returns 1 row.

But when we do a QUERY:GET_RECORDS, the returned table contains 0 row, instead of containing 1 row which is empty.
