#### Description

Today if we have for example a document of 300 pages we have the following behavior :

- 1) we do CTRL + P to print using the virtual printer then we see the print progress through the print driver
- 2) after a few seconds we have the Virtual Printer windows

But if we enter a wrong password, the application quits as soon as we clicked in the popup 'invalid password'.  
And we must get back to step 1...

Feature 1 : could we get back to the login/password window instead of closing the program ?

Feature 2 : could we set a maximum number of login attempts ?

This is feasible. The number of attempts will be defined in the Directory (default is 1 to be similar to current version).  
Only the messages bad password or bad user will allow to display again the login window.
