Description

Evening,

I have been trying to make two PHP connectors one for Windows 64bit and one for Linux 64bit but I'm having problems trying to make the two connectors, then I saw this in the Nirva documentation "..Nirva systems may provide compiled modules for some versions of php but not for all. Please ask us for that..."

Could you provide these two connectors for me.

Many thanks

Hi Andrew,

The Php connector is delivered in the Nirva/Sdk/Connectors/php directory as a source file. It must be compiled as a php extension module named nvcphp.dll (or .so or other dynamic library extension following the platform). Please consult the php documentation for further information about extension modules.

Here is a tutorial

<https://devzone.zend.com/303/extension-writing-part-i-introduction-to-php-and-zend/>

We have some compiled versions but only for old php versions and 32 bits only (php 4.34).

For other php versions, you should compile yourself the nirva php extension from the source delivered in Nirva/Sdk/Connectors/php directory

Kind regards

Pierre MARC
