Version:	4.7.005		

Description

We have an issue with the management of sessions in our service.

The session_open of our application uses the service, and in the cleanup of the session in the service we run Nirva commands (but reproduced with a MISC:NOP).

The problem occurs when the session_open of our application returns an error.
In this case, the session is not initialized by the Nirva server, but the server still runs the service cleanup code. In this particular case, when in the cleanup code we run the Nirva commands, they all return with a Nirva error SYSTEM:SESSION:107.

Thank you to help us manage this particular case.
