Target version:	4.7.006	Tested:	Yes
Operating System:	Any		
Version:	4.7.005		
Description			
<p>When Nirva stops, and if it hangs for any reason (problem on a service, or whatever), the SYSTEM log does not contain the last bit of information because the logs are not flushed.</p> <p>Could it be possible to force log flush when Nirva stops, so we are sure we have the latests logs if Nirva hangs or crash ?</p> <p>I also have another request less important: regarding services, the server logs "Unloading services...", but does not log the trace of the services unloaded, so we can not know which service hangs if one does. Would it be possible to log additional lines for every service unloaded like "Unloading service AA...", so we know which service causes the hang ?</p> <p>Thanks</p>
