Virtual printer - Bug #92

Text truncated in the VP

Description

We have some text in the VP displayed in font size 16 that is on 2 lines.
The problem is that the top of the first line is truncated.

We tested with smaller font size, and we don't have any problem.

We tested with larger font size, and even 1 line is truncated.
We tested with smaller font size and 3 lines, and the first line is truncated again.

We believe that the box containing the text has a fixed height.
Can you fix this, or explain what we did wrong?

We made a workaround using font size 15 that works fine with 2 lines.

Many thanks.

- Tested changed from No to Yes

This has been corrected. The message label height is now automatically calculated following content before repaint. The correction will be available in version 3.22 of the virtual printer.
